

Super-fast GPU & CPU video coding

Next generation products for professional broadcasting,
video editing and image compression.

[comprimato]

Long story, ...compressed.

Comprimato was born from a unique idea of leveraging the power of GPU's to speed-up video compression. What first started as a university project, led by Jiri Matela, quickly turned into a successful VC backed start-up.

Comprimato is super fast video processing software for Broadcast and OTT workflows. The Ultra HD video transcoding software leverages the supercomputing power of GPUs and CPUs to speed up video compression by 10x. Comprimato saves infrastructure costs by 70%, improves latency, enables new revenue streams through Ultra HD and High Dynamic Range (HDR) video.

Live TV streaming and broadcasting

We built next generation of the video processing solutions for broadcast and OTT delivery. With the focus on delivering new services to end users/viewers our software does "all-in-one" signal conversions and it is ready for OTT and IP broadcasting.

Film & VFX video processing

Comprimato is on a mission to enable smooth playback and editing of UHD 8K and beyond, bit-depth, network speed or video frame rate. We make video and VFX professional post-production job easier.

JPEG2000 Image solutions

We have the world's fastest, standard compliant, JPEG2000 image software encoder and decoder. Ideal for custom applications in Media & Entertainment video projects, large imagery processing or medical image storage.

Where do we see Comprimato?

We are enabling life-like viewing experience for next-generation video productions. We have pioneered GPU acceleration of video compression which we are offering to large video enterprises. Our goal is to shorten route towards new Ultra HD and 360/VR video standards through smart and ultra fast video coding.
