

*Data is a company's most important business asset.
Keep it safe with Safetica.*

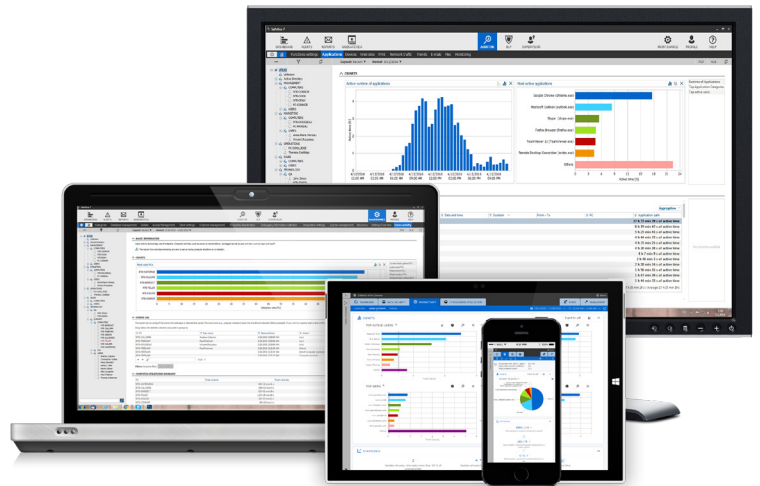

Have you ever accidentally sent an email with sensitive data to a wrong person?

Have any of your customers ever experienced the loss of a USB thumb drive, external hard drive, or laptop with confidential or proprietary data?

How do you store personal and payment information in compliance with HIPAA, GLBA, PCI-DSS or GDPR?

Safetica Data Loss Prevention

Safetica is a Data Loss Prevention (DLP) solution which helps businesses **identify and prevent** both accidental and deliberate insider threats that could lead to **critical data loss**. Safetica protects data by restricting what can be emailed, uploaded to the web, saved to an external drive, printed, or screen captured. Safetica can also identify employees with **risky behavior** or who are most likely to be looking for a new job. The solution makes it easy to see how data is being handled and even helps to implement regulatory **compliance**.

What makes us unique?

- Safetica helps small and mid-sized businesses affordably protect data in the same way that large corporations do.
- Safetica protects data without changing the way your people work helping you secure your business without losing productivity.
- Safetica shows you what's really going on in your company – from the inside – by monitoring employee activity and data use.
